

Liquid Nitrogen Aftercare

- The pain and burning sensation that follows the actual freezing will usually only last 10-30 minutes and will be accompanied by redness of the area.
- 8-72 hours after the freezing the full effect of the treatment will start to show.
- Within 24 hours a red to purple blister will appear. The treated area will then scab over within the next 7-10 days.
- **DO NOT PICK** the treated area. No special wound care is necessary.
- If your wound demonstrates signs and symptoms of infection such as **FEVER, REDNESS, WARMTH, PAIN** or **YELLOW DRAINAGE**, please call our office at (713)468-2200.
